Systems are pre-engineered packages providing fully finished panels with all necessary hardware required for operation. Maximum door height 10'.

Sliding Systems are supported entirely from the ceiling.

Sliding Bypassing Systems slide within an opening. Invisible floor guides are used to keep them aligned and overhead track stops prevent the panels from traveling too far.

Sliding Wall Systems are sliding panels linked by our unique floor trackless guiding system known as RGS (Raydoor Guiding System, Patent Pending). One panel pulled across the span brings the next until the space is closed. Panels consolidate to either side.

Sliding Wing Wall Systems are sliding walls that stack in front of a regular wall.

Sliding Pocket Systems slide into a pocket.

*Symmetrical Systems open from the center.

Sliding Pocket Wall Systems are sliding walls that stack into a pocket or housing.

Folding Center Systems slide and pivot along a central axis. They are hinged in pairs by invisible hinges and stack flat on either side of the opening.

Folding End Systems fold and pivot along the edge of the door. Each pair stacks flat to it's respective side.

Pivoting Systems are mounted between the floor

and ceiling. Center pivot hardware is not visible from either side.

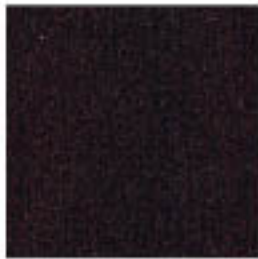

Fixed Systems are stationary panels that can be installed on their own or in conjunction with other systems.

Blank Systems are panels with no hardware.

◀ **High quality laminate frames** are miter joined and are made from a select group of low pressure laminates and vinyl laminates wrapped over wood composite frame cores.

◀ **Wood frames** are butt joined and made to order from real wood veneers. Each frame is hand sanded twice and finished with a double coat of clear lacquer (satin sheen). Upgrades include custom staining, veneers, stile and rail thicknesses, and lattice combinations.

▶ **Core layers** are 1/4" thick and are available in varying degrees of opacity as well as in different patterns and colors. Clear Frosted Acrylic comes standard with all systems. Upgrades like Opal Frosted Acrylic are recommended for added privacy. Clear Transparent is available with an Abrasion Resistant coating, and solid core layers like Satin Aluminum (not shown) are available as well.

Lattice

◀ **Lattice Designs** are 1-1/4" thick and are made from the same material as the frame. Lattice designs are on both sides of the door panel. The Lattice types (at bottom left) are common examples, custom patterns are available.

▶ **Hardware:** Some items are included in the system packages (ring pulls are included with pocket systems, flush bolts come with sliding wall systems etc...). Locks, pulls and other items are available as upgrades.

▶ **Track options:** The standard kit comes with all our sliding systems and includes: tracks, hangers, guides & stops. Low profile is an upgrade, available for sliding systems only.
